Inspector Findings

Recorded by the inspector alongside this form; each states its reason (Rule 61-30.801(5), F.A.C.).

RF-01 · MONITOR — Roof covering — roof covering

Roof covering appears approximately 5 years old; no matching permit from that period appears in the county records this report can reach. Why it matters: Work of this kind normally requires a permit. Unpermitted work conveys to the buyer -- verifying with the installing contractor or the building department is cheap before closing and expensive after. Recommendation: Further evaluation by a qualified specialist.

9964 STOCKBRIDGE DR, TAMPA FL 33626 • 4-POINT

Photo Evidence

Taken on-site by the inspector. GPS coordinates and timestamp are read from each photo's own camera EXIF data to verify it was taken at this property, on the inspection date.

What This Home Will Need

Built from the ages and materials recorded during your inspection.

Water heater replacement

Within about 2 years

Yours is about 10 years old; 8-12 is typical, and Florida's hard water tends toward the low end.

Recorded water heater age: 10 years (Garage)

Roof replacement

In roughly 15 years (around 2041)

Your inspector put remaining useful life at about 15 years. For context, an asphalt shingle roof in Florida typically gives 15-25 years and yours is about 5. Carriers commonly want to see three to five years left.

Remaining useful life on the 4-point: 15 years (roof age 5, Asphalt/Fiberglass Shingle)

Opening protection, whenever windows come due

This house predates the 2002 building code. Impact windows or rated shutters change what a wind mitigation form can report - worth timing with a window replacement you were going to do anyway rather than as a project of its own.

Year built: 2001

The Florida Year

Hurricane prep while it's still calm

Every May, before the season

Flush the AC condensate line

Monthly, June through October

Rinse the AC condenser

Quarterly if you're near the water

Clear the dryer vent

Once a year

Look the roof over

December, after the season

Don't let anyone pressure-wash a shingle roof

Any time somebody offers

Based on the ages and materials recorded during your inspection, and on typical service life in Florida - not on the condition of anything today. An inspection covers one day; this is what usually comes next.

ABOUT THIS REPORT

Who performed this inspection

This inspection was performed by Alex Rivera, Florida License No. HI99999, of Coastal Home Inspections, an independent licensed inspector, and the report was prepared and certified by that inspector. Warrior Inspection Network provided the software used to prepare and deliver this report; it did not perform, supervise, or review the inspection. This report was prepared for the client named in the pre-inspection agreement and the client's insurer, and describes the property as it was on the inspection date only. Anyone else who reads or relies on it does so at their own risk; the inspector owes them no duty. The inspector's liability is limited as stated in the pre-inspection agreement.

Flood, per public records

FEMA flood zone X (Minimal risk (Zone X)). Hurricane evacuation zone C (zones as of 10/23/2022). Ground at the parcel point is about 19.8 ft above sea level (USGS) - ground, not the finished floor. Storm surge, worst case by NOAA's model - Category 1: no inundation shown · Category 3: no inundation shown · Category 5: more than 9 ft above ground - a hazard, not a forecast. 5 hurricanes passed within 50 miles at hurricane strength since 1950 (3 since 2000): Milton 2024 (Cat 2, 39 mi), Irma 2017 (Cat 1, 26 mi), Jeanne 2004 (Cat 1, 40 mi), Gladys 1968 (Cat 2, 34 mi), Easy 1950 (Cat 1, 22 mi) - National Hurricane Center track record through 2024. 2 NFIP flood-insurance claims on record in census tract 115.25 since 2012, 1 in the last five years (worst years 2024, 2012); none on this block group. FEMA publishes claims by census area, not by address - this is the neighbourhood's record, not this property's. Sources: FEMA National Flood Hazard Layer; FEMA OpenFEMA NFIP claims data; Florida Division of Emergency Management evacuation zones; USGS 3DEP elevation; NOAA/NHC National Storm Surge Risk Maps; NHC HURDAT2. Looked up Sep 16, 2026.

Give it to the carrier

The signed form and its supporting documentation are what an insurer reviews. Whether any verified feature earns a premium credit is the carrier's determination, not the inspector's.

Keep the whole PDF together

The photographs and permit records are the proof behind the answers on the form. Forwarding the form pages alone leaves that evidence behind.
